CLAIMS

What is claimed is:

1. A system comprising:

a track segmentor;

a track database comprising at least one track element generated by said track segmentor; and

- a segment mixer to create a track from said at least one track element during play of said at least one track element.
- 2. The track elements of claim 1 wherein at least one of said track elements begins at the start of a beat, lasts a full number of beats and ends before the start of a next beat, whereby said track elements form building blocks enabling the creation of a track.
- 3. The track elements of claim 2, wherein each said track element is marked by a number denoting the number of beats it contains, whereby said track elements form building blocks enabling the creation of a track and the beat mixing of track elements.

- 4. A method for mixing track segments during play comprising:
 playing track segments according to preset instructions;
 checking preset instructions for next track segment to play;
 modifying preset instructions for a track segment;
 changing track segment play order according to modified instructions.
- 5. The track segments of claim 4, wherein at least one of said track segments begins at the start of a start of beat, lasts a full number of beats and ends before the start of a next beat, whereby said track segments form building blocks enabling the creation of a track.
- 6. The track segments of claim 5, wherein each said segment is marked by a number denoting the number of beats it contains, whereby said track segments form building blocks enabling the creation of a track and the beat mixing of track segments.

- 7. A method for representing a track, comprising:
 - a plurality of track segments
 - whereby said track segments form building blocks enabling the creation of a track
- 8. The track segments of claim 7 wherein at least one of said track segments begins at the start of beat, lasts a full number of beats and ends before the start of a next beat, whereby said track segments form building blocks enabling the creation of a track.
- 9. The track segments of claim 8, wherein each said track segments is marked by a number denoting the number of beats it contains, whereby said track segments form building blocks enabling the creation of a track and the beat mixing of track segments.
- 10. The track segments of claim 8 wherein the track database is stored on a separate media than the track.
- 11. The track segments of claim 8 wherein the track database is Is stored on the same media of the track.

12. A system comprising:

- a track database comprising data of at least one track segment;
- a master segment mixer to create at least one master track each from said data;
- at least one slave segment mixer to create at least one slave track each from said data; and
- a coupling means to combine said at least one master track and at least one slave track.
- 13. The system of claim 12, wherein slave segment mixer initiates playing in accordance to closest beat start of master segment mixer.
- 14. The system of claim 12, wherein said master segment mixer beat information is exported to at least one external device.
- 15. The external device of Claim 14, wherein said external device is Video equipment (VJ) whereby the video projected synchronizes with the music beat.
- 16. The external device of Claim 14, wherein said external device is Lighting equipment whereby the lighting effects synchronizes with the music beat.
- 17. The external device of Claim 14, wherein said external device is a musical instrument whereby the musical instrument synchronizes with the music beat.
